OBJECTIVE

Junior Cybersecurity Analyst / Application Security

PROFESSIONAL SUMMARY

Information Security professional with hands-on experience at the Legislative Assembly of Goiás (ALEGO, Brazil), focused on the preventive layer: security awareness, digital hygiene, OPSEC and Social Engineering (Phishing) prevention. Builds application security projects in PHP with OWASP Top 10 mitigations, documented in English, Spanish and Portuguese. Uses AI (Claude Code) for security code review, testing and documentation, validating every change. Pursuing a B.S. in Information Security (expected 2027).

TECHNICAL SKILLS

- **Information Security & Threats:** Phishing Analysis, Social Engineering Awareness, Digital Hygiene, OPSEC, E-mail Authentication (SPF, DKIM, DMARC), OWASP Top 10.
- **Application Security:** XSS, CSRF, Session Fixation, Broken Access Control, brute-force protection, Content-Security-Policy and security headers, password hashing (bcrypt).
- **Development:** PHP (Secure Coding), Python, HTML5, CSS3, Regex Parsing, SQL, Java.
- **Systems & Infrastructure:** Linux (Apache/LAMP, Bash), Windows Server, Networking Fundamentals.
- **Tools:** Git, GitHub, VS Code, curl, Claude Code (AI-assisted development).

PROFESSIONAL EXPERIENCE

Legislative Assembly of Goiás (ALEGO) – Parliamentary Office Goiânia, Brazil
Technology & Preventive Cybersecurity Analyst 01/2024 – Present

- Front-line preventive cybersecurity: guiding the team on digital hygiene, safe use of systems and social engineering prevention.
- Triage and identification of phishing attempts and suspicious e-mails received by the office.
- Promoting information security and OPSEC best practices, protecting data integrity and the institution's reputation.

CYBERSECURITY PROJECTS (GITHUB)

1. Secure Authentication & Session Management System (PHP) Repository

- bcrypt-hashed login with server-side brute-force lockout (5 attempts → 15 min) and timing-safe username checks.
- Session Fixation and hijacking defenses: session_regenerate_id(), HttpOnly/SameSite cookies, strict mode, idle and absolute timeouts.
- Centralized access control (OWASP A01), CSRF tokens on login/logout and security headers (CSP, X-Frame-Options).

2. Phishing & Email Header Analyzer (PHP) Repository

- Triage tool that extracts IoCs (origin IP, From, Return-Path, Reply-To) from raw e-mail headers.
- Reads SPF/DKIM/DMARC from the trusted Authentication-Results header and produces an explainable risk score, flagging spoofing and BEC tactics.

3. Secure Input Validation & Output Encoding (PHP) Repository

- Allowlist input validation and output encoding to neutralize XSS; blocks javascript:/data: URLs.
- CSRF protection and a strict Content-Security-Policy, with documented, reproducible defense tests.

EDUCATION & LANGUAGES

- **B.S. in Information Security** – Expected graduation: 12/2027
- **Portuguese:** Native — **English:** Advanced / Technical — **Spanish:** Intermediate
