Ederson Matheus dos Santos Alfonso

Cybersecurity Analyst — SOC | Phishing Triage | Application Security

Goiânia, GO – Brazil (Open to Remote Work / Relocation)
Contact: +55 (62) 92003-8598 — ederson.alfonso@icloud.com — Portfolio: mattheusalfonso.github.io
LinkedIn: linkedin.com/in/mattheusalfonso — GitHub: github.com/MattheusAlfonso

SUMMARY

Cybersecurity analyst focused on SOC operations, phishing triage and application security. Working at the Legislative Assembly of Goiás (ALEGO, Brazil) on email threat triage and staff security awareness. Builds hands-on projects in Python, SQL and Linux — phishing analysis, a SIEM lab and the security of a team-built web platform — all documented on the portfolio and GitHub. Public sector experience since 2017, handling confidential records under LGPD (Brazil's data protection law). Pursuing a Technologist Degree in Cybersecurity at Anhembi Morumbi University (expected 2028).

TECHNICAL SKILLS

- **SOC & Incident Response:** alert and suspicious email triage, log analysis, SIEM (Wazuh), IoCs, MITRE ATT&CK, incident response lifecycle (NIST SP 800-61).
- **Phishing & Threat Intel:** SPF/DKIM/DMARC, header and spoofing analysis, VirusTotal API, social engineering and security awareness.
- **Networking:** TCP/IP, OSI model, DNS, HTTP/HTTPS, traffic analysis (Wireshark), firewalls and segmentation.
- **Application Security:** OWASP Top 10 and OWASP API Security Top 10 (XSS, CSRF, SQL Injection, IDOR), authentication and sessions, threat modeling (STRIDE), code review.
- **DevSecOps:** GitHub Actions, Semgrep, Bandit, gitleaks, Trivy, Dependabot, Docker.
- **Programming & Data:** Python (automation, REST APIs), SQL (PostgreSQL), Bash, PHP, Regex.
- **Systems & Compliance:** Linux, Windows, Git/GitHub, LGPD (pseudonymization, data minimization, least privilege).
- **Currently deepening:** detection rules (Wazuh/Sigma), networking (CCNA level), Cyber Threat Intelligence, cloud security fundamentals.

PROFESSIONAL EXPERIENCE

Legislative Assembly of Goiás (ALEGO) – Parliamentary Office Goiânia, Brazil
Executive Secretary | Preventive Cybersecurity 07/2026 – Present

- Shared email threat triage in a two-person office security function, reviewing 60+ suspicious emails per month (sender domains, headers, embedded links) and confirming 73 phishing attempts since July 2026, with no credentials compromised.
- Delivered security awareness guidance to 10 staff on phishing, password hygiene and safe use of corporate systems.

Earlier public sector roles (2017–2026): DETRAN-GO, ALEGO and the State Court of Justice (TJGO) – Administrative Assistant: verified identity and legal documents in state systems and handled confidential records under strict procedures and LGPD.

CYBERSECURITY PROJECTS

1. PyThreatIntel – Phishing & Threat Intel Analyzer (Python) github.com/MattheusAlfonso/pythreatintel

- Analyzes .eml files: validates SPF/DKIM/DMARC, traces the origin IP through the Received chain and detects spoofing (From × Return-Path × Reply-To).
- Extracts IoCs (URLs and attachment SHA256 hashes), checks IP reputation via the VirusTotal API and produces a risk score with JSON output for SIEM pipelines.

2. SecAwareness – Security Awareness Platform (team of 3, in progress) mattheusalfonso.github.io

- Security lead: STRIDE threat model, security review of the FastAPI backend (8 findings, including IDOR and unauthenticated endpoints) and fixes through cross-reviewed PRs.
- Security pipeline in GitHub Actions (Semgrep, Bandit, gitleaks, Trivy, Dependabot) and PostgreSQL with least-privilege roles and data pseudonymization (LGPD).

3. SOC Home Lab – Detection with Wazuh SIEM (in progress) mattheusalfonso.github.io

- Detection lab: log collection and analysis from Linux and Windows endpoints, alerts mapped to MITRE ATT&CK and documented investigation cases.

4. Secure Auth & Session Management System (PHP) github.com/MattheusAlfonso/secure-auth-system

- bcrypt login, brute-force lockout, Session Fixation and CSRF defenses, centralized access control (OWASP A01) and security headers.

EDUCATION & LANGUAGES

- **Technologist Degree in Cybersecurity** — Anhembi Morumbi University | 2026–2028 (expected)
- **Portuguese:** Native — **English:** Advanced / Technical — **Spanish:** Intermediate
